

OLYMPIAD/LARGE TEST RANKING REPORTS

We have been providing solution to several organisations conducting olympiads or large scale multi-branch-tests. Each one of them comes out with their own requirements in the form of various report formats. But we observe that, except for the changes in layout of report or sequence of columns presentation, there is hardly anything new.

A **general scenario** is where test is conducted for **several classes/levels** in **multiple branches/schools** in **multiple cities/zones** spread over **several states**.

Some common requirements are :

- School wise Rank
- City/Zone/Centre wise Rank
- State Rank
- India/National Rank
- all the above ranks for overall test and **subject wise ranks** also.

Addmen software is able to handle all such requirements and **provides all above types of ranks**. But since it is generic and scalable software, not made for any specific user, so it **generates reports and ranks in generic formats**.

Now, if the client has a specific report format, there are two options:

Option 1) The generic reports are drawn from software and merged in excel at user level to form their desired output.

This method is most suggested because, the maximum work which includes individual result processing of thousands of candidates with all desired parameters and ranking is easily done and delivered by the software. So the final solution can be simply and economically achieved using software & excel without wasting any time or money.

Option 2) We customise the software to directly deliver your specific report.

This method would be chargeable and require sufficient time. Though we do not see much benefit of this expenditure of time and money as the desired report would be a onetime required output at the end of the event, that can be conveniently created in excel by simple copy and paste.

Please see below the screenshots and output showing how the software delivers all the ranks.

If the tests are planned systematically, then the entire task is very simple.

Give 2-digit code to State, there are only 40 states. Realistically, in a state there won't be more than 99 cities participating. And realistically, in a city, there won't be more than 99 schools or centres in a city. So a unique school/branch code can be derived as SS+CC+BB.

Tests are always different for every class due to difference in academic level. And each test can contain multiple subjects/sections. So we automatically have 6 levels of segregation i.e. 1) Country [all]; 2) State; 3) City; 4) School; 5) class; and 6) Subject [within class].

See the below example:

Test is for 2 classes: Class 6 and Class 7

Two states are participating 22 & 33. In state 22 there are 2 cities 88 and 99. In state 33 there are 2 cities 66 and 77. In city 88 there are 2 schools 8801 & 8802. Similar in other cities 99,66,77 there schools like 9901, 9902, 6601, 6602, 7701, 7702.

So unique school codes are 228801, 228802 and like wise.

STATE CODE	STATE	CITY CODE	CITY	SCHOOL	SCHOOL NAME	CLASS	ROLL NO	NAME

The sheets should be scanned in School wise Folders as per following tree order:

Test/ Class > Unique School Code

i.e. the parent folder should be Class and all the schools should be as subfolders just one level down.

Creating complex tree with multiple level of subfolders (like **Class > State > City > School**) is not suggested.

1A : Screenshot of result interface, showing all tests for all state, all cities, all schools and all classes.

The screenshot shows the 'Addmen OMRv15 - Standard - [VIEW RESULT]' application window. The main area is titled 'VIEW RESULTS PANEL' and contains several filter sections: 'SERIES' (with a dropdown for '0'), 'SUBJECT' (with checkboxes for ENGLISH, SCIENCE, MATHS, and GK), and 'GROUP' (with checkboxes for 228801, 228802, 229901, 229902, 336601, 336602, 337701, and 337702). A 'Select All Group' checkbox is also present. The central table, titled 'TEST ID's', has columns for TEST, DATE, and RECORDS. It lists two tests: '2 [CLASS 7 OLYMPIAD]' on 10-Feb-2016 with 25 records, and '1 [CLASS 6 OLYMPIAD]' on 10-Feb-2016 with 35 records. On the right side, there are several functional sections: 'EXPORT TEST DATA TO SQL' with a 'CLEAR' button; 'PROCESS RESULT' with a 'REGISTERED CANDIDATES ONLY' checkbox, a 'CALCULATE' button, and a 'MARK LIST - REGULAR' dropdown with a 'SEARCH' button; 'REPORT LAYOUT' with a 'PREVIEW' button, 'RollNo Order' and 'Percentage' dropdowns, and a 'CREATE PDF' button; 'EXPORT' with an 'EXPORT' button, 'Export Sheets' and 'Attach Form Data' checkboxes, and a dropdown for 'EXCEL - Candidate Summary'; and 'UPLOAD' with 'UPLOAD RESULT' and 'DELETE UPLOADED RESULT' buttons, and an 'External Data' checkbox.

1B : Excel with result of all candidates of all test for all state, cities, schools (India Rank & School Rank).

2A : Screenshot of result interface, showing all tests for class 6 with all state, all cities, all schools.

The screenshot displays the 'Addmen OMRv15 - Standard - [VIEW RESULT]' application window. On the left, the 'VIEW RESULTS PANEL' includes filters for 'SERIES' (0), 'SUBJECT' (English, Science, Maths, GK), and 'GROUP' (228801, 228802, 229901, 229902, 336601, 336602). The central 'TEST ID's table shows two tests for 'CLASS 6 OLYMPIAD' on '10-Feb-2016' with 35 records each. The right-hand side features a 'PROCESS RESULT' section with a 'REGISTERED CANDIDATES ONLY' checkbox and a 'CALCULATE' button. Below it, a 'RESULT/ANALYSIS TYPE' dropdown is set to 'MARK LIST - REGULAR', with a 'SEARCH' button. Further down, there are buttons for 'DELETE', 'CANDIDATES', 'MANAGE DATA', and 'MANUAL MARKS'. The 'REPORT LAYOUT' section includes a 'PREVIEW' button and a 'CREATE PDF' button. The 'EXPORT' section has an 'EXPORT' button and options for 'Excel-Candidate Summary', 'Question No.', and 'BLUE PRINT'. At the bottom, an 'UPLOAD' section contains 'UPLOAD RESULT' and 'DELETE UPLOADED RESULT' buttons. A red status message at the bottom reads 'SEARCH COMPLETE [35]'.

2B : Excel with result of all candidates of class 6 for all state, cities, schools (India Rank & School Rank).

6. Olympiad Rank Add-on feature to Professional version

The Professional version with Olympiad Add-on module generates an Excel file (TEST RAW DATA.XLSX) with multiple levels of ranks. This Excel file is used as input in the Olympiad Report printing module for printing various formats of Rank Reports and Certificates.

Several variants of Reports can be generated for different groups like School wise reports for each class etc.

VDP & PDF Merger Module : If sheets with pre-printed candidate IDs have to be provided or if more combinations of result PDFs are required, like one PDF for entire school including all classes or one PDF for one class including all schools, then the Variable Data Printing and PDF merger module is available to fulfill these needs.
